

## Socially Speaking™ App for iPad Users:

**SOCIALLY SPEAKING LLC**

★ IN A NUTSHELL★

### Solutions My App Provides the Young Child's Team:

- Provides an easy, succinct, and visual way to assess and determine "missing pieces of the puzzle" with regard to the young child's social skills development, play skills development, and self regulation skills
- Ties the child's current level of behavioral/social skills functioning **directly** to the future lesson plans aimed at increasing pragmatic and self regulation skills in young children with Autism and other special needs
- Allows the iPad user to customize lesson plans with goals and graphics, to give the child's team common ground/language, better perspective, and an easier time documenting future IEP goals which are federally mandated each year for the child with special needs

### Objective of My App:

I designed the Socially Speaking™ App as an assessment protocol containing 2 developmental checklists re: social skills development, and a lesson plan template to help the young child with Autism and other special needs. Update baseline data, determine starting points for remediation, and succinctly document the lesson's materials/techniques. Customize Behavior Plans and IEP goals for the child in need of help. Upload your own photos or take photos on the go, for a unique "hands on" experience to facilitate teamwork. Export your entire evaluation as a PDF, which can be Emailed immediately to file.

### Goals of My App:

1. To assess social skills development in young children with Autism and special needs
2. To formulate and implement more precise, customized IEP goals to facilitate self regulation and social skills in young children with Autism and special needs
3. To enhance multidisciplinary collaboration for the child in need of behavior management and social skills strategies
